Todo Application Test Plan

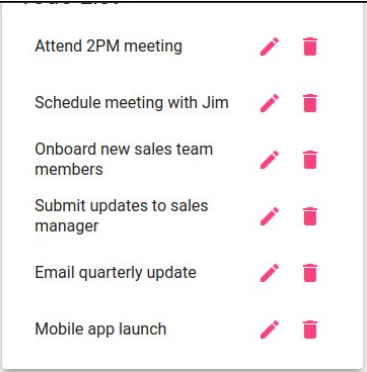

Assignment module 4.2

Pr. Sampson

Test 1	Create a new todo task item			
	Test Objective: The test checks that the user can add a task item to the Todo list.	Developer: Patrice Moracchini Date tested: 2026/06/25	Peer tester: Isaac Ellingson Date tested: 2026/06/28	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Visit https://buwebdev.github.io/todo/	The browser displays the page.	Yes	Welcome to the Todo App! Task Form Task Add Task Yes
2	Click in the task form box.	The cursor appears under "Task".	Yes	Welcome to the Todo App! Task Form Task Add Task Yes
3	Type the new task item.	The text appears as the user types it.	Yes	Task Form Task the new task item Yes

4	Click "Add Task".	The box is clickable and the task is submitted.	Yes	 Yes
5	Scroll down to check the task has been added.	The task appears at the bottom of the list.	Yes	Yes
Comments	Task form entry box shows blue on initial input instead of red; because of input focus loss during a screenshot, this behavior could not be imaged. The "Add Task" button only enabled and became clickable when valid input was in the Task Form. I was, however, able to enter five normal spaces into the entry box and add blank tasks to the list.			

Test 2	View a list of todo task items			
	Test Objective: The test checks that the user is able to view a list of todo task items.	Developer: Patrice Moracchini Date tested: 2026/06/25	Peer tester: Isaac Ellingson Date tested: 2026/06/28	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Visit https://buwebdev.github.io/todo/	The browser loads the page without error.	Yes	Welcome to the Todo App!  Yes
2	Scroll down to see the complete todo list	The page is responsive the scroll works and it displays the complete todo list.	Yes	 Yes

3	Refresh the page.	The browser displays correctly the page with the todo list.	yes	 Yes
Comments	On our normal testing desktop computers, there is no scroll behavior, and the list appears entirely on the screen. Switching into responsive design mode allowed scrolling down the list and verifying that all items were visible in a constrained environment. Unfortunately, refreshing the page seems to delete any added tasks.			

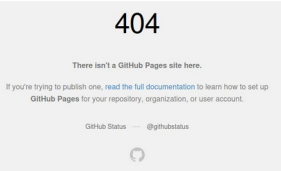

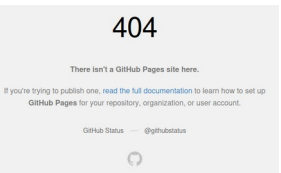

Test 3	Edit a todo task item			
	Test Objective: The test checks that the user can edit a task item from the list.	Developer: Patrice Moracchini Date tested: 2026/06/25	Peer tester: Isaac Ellingson Date tested: 2026/06/28	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail

1	Visit https://buwebdev.github.io/todo/	The browser displays the page.	Yes	Welcome to the Todo App! Task Form Task Add Task Yes
2	Click the pencil-shaped icon.	The icon is clickable and an "Edit Form" window appears with the task, a cursor and a save button.	Yes	Edit Form Task Attend 2PM meeting Save Yes
3	Edit the task and submit it.	The task can be edited and saved.	Yes	Edit Form Task Attend rescheduled 4PM meeting Save Yes

4	Confirm that the task has been edited and appears in the list.	The edited task is listed.	Yes	Todo List Attend rescheduled 4PM meeting   Yes
Comments	Editing worked acceptably. Deleting the text entry entirely did not disable the Save button. Clicking Save works in this case, so completely empty tasks can be saved in this way. I expected to encounter the same input validation as the Task Form, and did not.			

Test 4	Delete a todo task item			
	Test Objective: The test checks that the user is able to delete a task item from the list.	Developer: Patrice Moracchini Date tested: 2026/06/25	Peer tester: Isaac Ellingson Date tested: 2026/06/28	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Visit https://buwebdev.github.io/todo/	The browser displays the page.	Yes	Welcome to the Todo App! Task Form Task Add Task Yes
2	Click on the “trash can” shaped icon corresponding to the task that the user wants to delete.	The app removes the chosen task.	Yes	Todo List Attend 2PM meeting   Schedule meeting with Jim   Submit updates to sales manager   Email quarterly update   Mobile app launch   Yes
3	Review the list.	The chosen task has been removed from the list.	Yes	Yes

Comments	Tasks always kept their expected relative position in the list through deletions, even when one of several identically-named items is deleted from the list. Deleting every Task in the Todo list works. No adverse or unexpected behavior was found.
----------	---

Test 5	For invalid URLs, provide users with a custom 404 error page			
	Test Objective: The test checks that when the user enters an invalid URL, the browser will display a custom 404 error page.	Developer: Patrice Moracchini Date tested: 2026/06/25	Peer tester: Isaac Ellingson Date tested: 2026/06/28	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Visit https://buwebdev.github.io/tod	The browser requests an address with a character missing.	Yes	Yes
2	Review the displayed page.	A 404 error page with a custom message appears	Yes	 No
3	Refresh the page with the same typo.	The same 404 error page appears.	Yes	 No

4	Enter the right address https://buwebdev.github.io/todo/	The page displays correctly without error.	Yes	Welcome to the Todo App! Task Form Task Add Task
Comments	Much of the issues here are test design error; if the GitHub Page isn't spelled right, you're not asking for the Todo app, you're asking GitHub to find a buwebdev app named "tod", which doesn't exist. The GitHub URL router and 404 page are outside our control. However, this test still fails for the url https://buwebdev.github.io/todo/todo - the presented custom 404 page is insufficient to direct a user back to the app.
