

Project:	Assignment 4.2
Course:	CSD-380
Description:	Test Plan for Todo Application
Date:	6/28/2026

Table of Contents

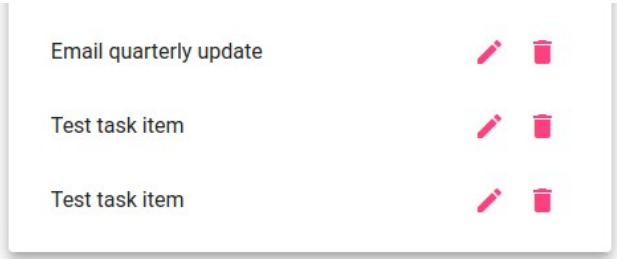

Create a new todo task item.....	1
Delete a todo task item.....	2
For invalid URLs, provide users with a custom 404 error page.....	3
Prevent users from submitting a task form without entering a todo item.....	4
Prevent users from submitting the edit form without entering a todo item.....	5

Test 1	Create a new todo task item			
	Test Objective: Verify that a user can enter a valid task item (four or more characters) and add it to the Todo List.	Developer: Sara White Date tested: 2026/06/25	Peer tester: Isaac Ellingson Date tested: 2026/06/28	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Go to https://buwebdev.github.io/todo/	The website should load successfully	Yes	Yes

				Welcome to the Todo App! Task Form Add Task Todo List
2	Type in a task item (you can type "Test task item")	Add task button should remain grey/unclickable until at least 4 characters have been entered into the task form field	Yes	Yes Task Form Test task item Add Task
3	Click "add task"	After clicking "add task" the new task item should be added to the bottom of the todo list	Yes	Yes Email quarterly update Mobile app launch Test task item
Comments	The website loaded with no issues. I was able to type in a task item using the provided text (Test task item). After 4 characters were present in the input field, the "add task" went from grey to dark pink. I was able to click the "add task" button and the new task appeared at the bottom of the to do list.			

	All steps reliably succeed. However, entering four or more blank spaces allows addition of a blank task, and identical duplicate items can be added without issue. New tasks appear infallibly at the end of the list as expected.
--	--

Test 2	Delete a todo task item			
	Test Objective: Verify that a user can remove an existing task item from the Todo List	Developer: Sara White Date tested: 2026/06/25	Peer tester: Isaac Ellingson Date tested: 2026/06/28	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Go to https://buwebdev.github.io/todo/	The website should load successfully	Yes	Yes Welcome to the Todo App! Task Form Task Add Task Todo List
2	Click the trashcan icon to the right of a Todo List task item	Task item should disappear from Todo List	Yes	Yes

				
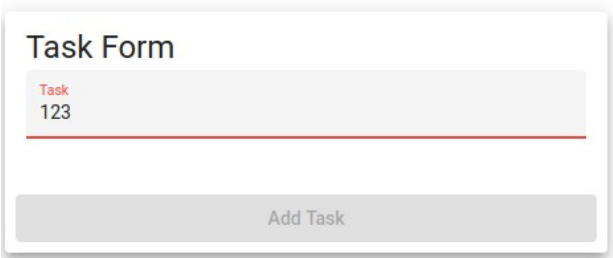

Comments	The website loaded properly and after clicking the trashcan icon, the task item was removed from the Todo list. Items delete reliably and successfully. This is true even for large lists, or for deleting lists until they are empty. Because an empty list has no trash cans to click, it does not appear possible to "over-delete" past the empty list.			

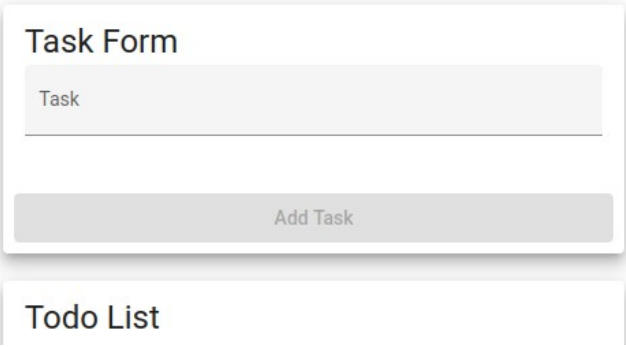

Test 3	For invalid URLs, provide users with a custom 404 error page			
	Test Objective: Verify that a custom 404 message displays when an invalid Todo website URL is entered	Developer: Sara White Date tested: 2026/06/25	Peer tester: Isaac Ellingson Date tested: 2026/06/28	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Go to https://buwebdev.github.io/todo/404test	The site does not load a regular Todo page	Yes	Yes

				
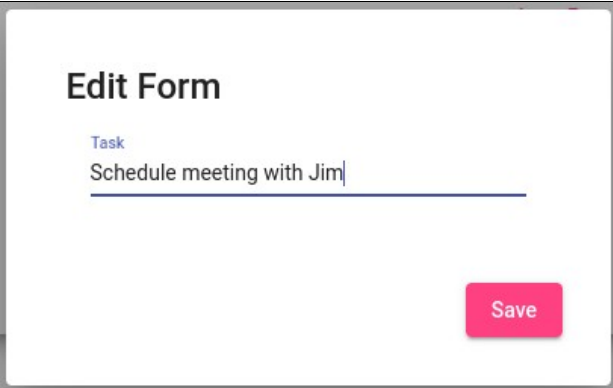

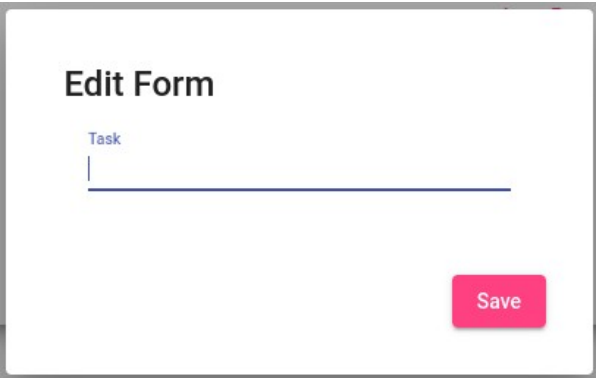

2	Confirm a custom 404 message is displayed	User should see a custom 404 message ("not-found works!") instead of a generic browser error	Yes	No 
Comments	After visiting the provided invalid Todo URL, a page was displayed with a custom 404 message that read "not - found works!" The website serves a custom page with a custom message on invalid page access. The page is returned with a 404 HTTP status code as expected. However, this appears to be a page stub. It neither explains what happened to the user, nor helps the user navigate back to the correct Todo app URL.			

Test 4	Prevent users from submitting a task form without entering a todo item			
	Test Objective: Verify that the task form prevents a user from submitting a task item that is less than four characters.	Developer: Sara White Date tested: 2026/06/25	Peer tester: Isaac Ellingson Date tested: 2026/06/28	
Step	Action	Expected	Developer	Tester pass/fail

		results:	pass/fail	
1	Go to https://buwebdev.github.io/todo/	The website should load successfully	Yes	Yes Welcome to the Todo App! Task Form Add Task Todo List
2	Click inside the Task Form input field	Placeholder text ("Task") should shrink above caret	Yes	Yes Task Form Add Task
3	Type "123" into the Task Form	"Add task" button should remain grey and inactive	Yes	Yes Task Form Add Task
5	Click "add task"	Nothing should	Yes	Yes

		happen.		
Comments	After typing “123” (with no additional characters or spaces) into the task form, the “add task” button was greyed out. I attempted to click the button, and nothing happened. While the screenshot indicates red highlighting in the input form, the initial click into the input field shows blue. This visual cannot be captured because capturing the screen causes focus to be lost, triggering input validation. As mentioned above, entering five spaces enables the button, allowing blank tasks to be submitted.			

Test 5	Prevent users from submitting the edit form without entering a todo item			
	Test Objective: Verify that the task form within the edit popup prevents a user from submitting a task item that is less than four characters.	Developer: Sara White Date tested: 2026/06/25	Peer tester: Isaac Ellingson Date tested: 2026/06/28	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Go to https://buwebdev.github.io/todo/	The website should load successfully and task items should be present in the Todo List	Yes	Yes Welcome to the Todo App! 
2	Click the edit icon to the right of one of the task items in the Todo List	Edit Form will pop up in the center of the page with the current task item in the input field	Yes	Yes

				
3	Delete the text in the task item field (do not type anything into the field)	User should be able to delete the existing task item and the “save” button should appear grey	No	No 
4	Click the “save” button in the bottom right corner	Nothing should happen. The “save” button should not be clickable and should only be active and appear dark pink if four or more characters have been	No	No
